

Field Staff Module

Product Dossier for Marketing, Sales, and Support Teams

- Attendance + GPS
- HR Operations
- Payroll Workflow
- Reporting & Payrun
- Role-Based Access

This dossier summarizes product capabilities, business value, user workflows, and support scope.

1. Product Overview

Field Staff is a white-labeled workforce operations module designed to connect field attendance, HR controls, and payroll preparation in one workflow.

Core Outcomes

- Capture verifiable attendance with geolocation data.
- Standardize HR operations through one workspace.
- Move from attendance to payrun with reporting clarity.

Best Fit Use Cases

- Field service operations
- Construction and industrial teams
- Distributed mobile workforce management

2. Feature Set

Area	What It Does	Business Impact
Attendance	Clock in/out with GPS coordinates, notes, and attendance ledger history.	Reduces time ambiguity and supports accountability in field operations.
Employee Pay Setup	Stores payroll profile data (rates, allowances, deductions, statutory values).	Improves payroll consistency and reduces manual recalculation.
Shift Scheduling	Creates shift templates and distributes shifts by staff/department/date range.	Improves workforce planning and attendance alignment.
Manual Attendance	HR can apply controlled attendance adjustments when needed.	Handles real-world exceptions without breaking payroll cycles.
Leave Tracking	Records leave entries and status changes (Pending/Approved/Rejected).	Keeps scheduling and payroll context synchronized.
Reporting & Payrun	Attendance reports + CSV export + payrun statement generation.	Supports management visibility and payroll cycle readiness.
Project Assignment	Assigns projects to one or multiple staff with date ranges and status tracking.	Improves supervisor-level resource allocation.

3. Role and Access Control

The module enforces server-side access checks and renders only permitted workspace tabs.

- Capabilities: view_own, view, edit, create

- Project Assignment access uses strict role-ID allowlist (not title matching)
- Admin panel allows explicit role-ID updates and displays current user role context

4. Workflow Summary by Team

Marketing Talking Points

- End-to-end attendance-to-payrun workflow in one module.
- Geolocation-backed attendance evidence.
- Operationally practical for field-heavy teams.
- Permission-driven workspace for governance and scale.

Sales Qualification Points

- Does client run distributed teams? Strong fit.
- Need payroll prep from attendance records? Strong fit.
- Need manager/supervisor assignment controls? Strong fit.
- Need exportable operational reporting? Strong fit.

Support Team Operational Flow

1. Verify installation and schema readiness.
2. Validate role capabilities and allowlist configuration.
3. Reproduce issue path (attendance, operations, reporting, payrun).
4. Confirm expected behavior vs configured permissions.
5. Use changelog and docs set for version-specific troubleshooting.

5. Payroll Rules Built In

- Weekly regular hours cap: **44.00**
- Overtime multiplier: **1.5x**
- NIB split: **5.5% employee / 6.5% employer**
- NHIP split: **3.0% employee / 3.0% employer**
- NHIP monthly ceiling reference: **7800.00**
- Flexible additions/deductions supported via EAV payroll attributes.

6. Reporting Outputs

CSV exports are available for:

- Attendance record report
- Attendance summary report
- Daily attendance report
- Monthly attendance report
- Department-wise report

7. Packaging and Readiness

The module includes an Envato readiness kit with packaging guidance, listing template, UAT checklist, and support policy for commercial release workflows.

8. Documentation Set Included

- README and full feature specification
- Setup and operations handbook
- Permissions matrix

- Endpoint reference
- Business workflow runbook
- Envato readiness and support policy documents
